SUMMARY

Experienced software engineer building scalable and maintainable systems using Spring Boot, MySQL, AWS, Redis, Node.js, and NestJS. Skilled in applying distributed system, domain-driven design and test-driven development principles to develop user-centric solutions.

PROFESSIONAL EXPERIENCE

Rewaa: Software Engineer **April 2024 – Present**

- Designed and implemented an omni service which connects sellers to various e-commerce platforms (Salla, Zid, WooCommerce).
- Worked on testing, deployment and ongoing maintenance of a scalable microservice using **Docker** and **AWS**.
- Successfully migrated users from monolith to microservice-based architecture with **95% customer satisfaction.**
- Integrated real-time monitoring dashboards on **Datadog** for proactive service performance monitoring, resolving **90%** of issues proactively and maintaining **99.9%** uptime.
- Implementing proven design patterns and using **domain-driven design** for modularity and decouple business logic.
- Developed an alerting system using AWS SNS and Slack to provide real-time failure notifications.
- Actively work on customer issues to debug outages, performance issues, and response delay such as database performance tuning, infrastructure setbacks and processing timeout.
- Reduced customer support tickets by **20%** by enhancing logs with detailed error messages, enabling quicker self-diagnosis and resolution of issues.
- Collaborated with cross-functional teams to implement scalable features, and peer code reviews for faster releases.

DigitalHire: Software Engineer **June 2023 – April 2024**

- Backend development working on delivering multiple layers of features leveraging the microservice architecture in **Spring Boot** and **MySQL**.
- Integrated **event-driven architecture** with Kafka that **eased** and **reduced** time in communication between microservices by **15%**.
- Improved API response time by **30%** by adding optimization in business logic and database queries.
- Achieved 100% **test coverage**, resulting in 30% **reduction** in post-release defects.
- **Collaborate** with internal and external stakeholders also engineering leaders leading to a 20% deduction in the development cycle. Using **paired programming** across teams to ensure on-time delivery.
- Incorporating systematic **refactoring**, **code readability,** and **TDD** to increase high code maintainability by 30%.
- Optimize video uploading process using **chunking** and ffmpeg library increase performance for users.
- Actively participated in building **containerized** applications using Docker and **deployed** on AWS.

Astera, Pakistan: Software Engineer Intern **June 2022 – August 2022**

- Developed a **feature** and **fixed bugs** in their data warehousing product to improve **user flow**.
- Suggested and implemented **data masking** techniques in their DWBuilder, resulting in **10%** better analytics results.

EDUCATION

B.S, Computer Science Institute of Business Administration **2019-2023**
CGPA**:** 3.44

PROJECTS

BidBuy,

- Develop a bidding marketplace, make **RESTful APIs** in the backend, and gain knowledge about the MERN stack and Cloudinary for cloud storage to store photos.

ChatApplication,

- Design a chat application using React and NodeJS with SocketIO library with NPM to perform chats between different users.

Rate-Limiter,

- Implemented **rate limiting algorithms** like token bucket and per client rate limiting in Golang.

ACTIVITIES

- Participated in the Topi on-site round of **ICPC 2022** and came in the top **15** teams from all over Pakistan
- Secured 3rd position in IBA CodeFest in speed programming out of 200+ participants.

TECHNICAL SKILLS

Languages/Framework: SpringBoot, Kotlin, SQL, NestJS, NodeJS, AWS, Angular, ReactJS, TypeScript, Java, JavaScript, Python, Hibernate, Ktor, JUnit, Mokito

Tools: MySQL, Apache Kafka, Docker, PostgreSQL, Datadog, Jira, Firebase, MongoDB, Github, Figma, OpenAI API
