PROFESSIONAL EXPERIENCE

Rewaa:

Software Engineer II **September 2025 - Present**

- Co-led the design and launch of '**Publish**' feature, automating inventory creation across external channels; feature adoption reached **90%** among omni users.
- Introduced **feature flagging** with Launchdarkly in omni microservice, enabling widespread controlled rollouts and A/B testing of features.
- Reduced customer support tickets by **20%** by enhancing logs with detailed error messages, enabling quicker self-diagnosis and resolution of issues.
- Designed and implemented an event-driven **WhatsApp integration** using **AWS SQS, and Unifonic API**, leveraging a modular service architecture.
- Utilising MCP servers (JIRA & Datadog) and AI Models to automate production bug analysis and integration test execution
- Mentored a new team member, reducing ramp-up time and ensuring alignment with team engineering standards.
- Engaged in the entire SDLC, from ticket grooming with the product team to conducting code reviews.

Software Engineer I **April 2024 – August 2025**

- Designed and implemented an omni service which connects sellers to various e-commerce platforms (Salla, Zid, WooCommerce).
- Successfully migrated users from monolith to microservice-based architecture with **95% customer satisfaction.**
- Integrated real-time monitoring dashboards on **Datadog** for proactive service performance monitoring, resolving **90%** of issues proactively and maintaining **99.9%** uptime.
- Implementing proven design patterns and using **domain-driven design** for modularity and decouple business logic.
- Developed an alerting system using AWS SNS and Slack to provide real-time failure notifications.

DigitalHire: Software Engineer I **June 2023 – April 2024**

- Backend development working on delivering multiple layers of features leveraging the microservice architecture in **Spring Boot** and **MySQL**.
- Integrated **event-driven architecture** with Kafka that **eased** and **reduced** time in communication between microservices by **15%**.
- Improved API response time by **30%** by adding optimization in business logic and database queries.
- Achieved 100% **test coverage**, resulting in 30% **reduction** in post-release defects.
- **Collaborate** with internal and external stakeholders also engineering leaders leading to a 20% deduction in the development cycle. Using **paired programming** across teams to ensure on-time delivery.
- Incorporating systematic **refactoring**, **code readability,** and **TDD** to increase high code maintainability by 30%.
- Optimize video uploading process using **chunking** and ffmpeg library increase performance for users.
- Actively participated in building **containerized** applications using Docker and **deployed** on AWS.

OPEN SOURCE CONTRIBUTIONS

n8n (TypeScript, Node.js, Workflow Automation)

- Delivered production-grade fix in workflow execution queue (PR **#27793**), improving system reliability.
- Navigated and contributed to a large-scale codebase with strict CI/CD and review processes.

LangChainJS (TypeScript, LLM Framework)

- Contributed PRs (**#10550**, **#10551**) addressing bugs and improving developer experience.
- Enhanced robustness of chain execution logic while maintaining backward compatibility.

EDUCATION

B.S, Computer Science Institute of Business Administration **2019-2023**

PROJECTS

BidBuy,

- Develop a bidding marketplace, make **RESTful APIs** in the backend, and gain knowledge about the MERN stack and Cloudinary for cloud storage to store photos.

CodeSync,

- Built a Git-inspired **version control CLI** from scratch in Python, with staging, commits, branches, checkout, and local snapshot storage.

TECHNICAL SKILLS

Languages/Framework: SpringBoot, Kotlin, SQL, NestJS, NodeJS, AWS, Angular, ReactJS, TypeScript, Java, JavaScript, Python, Hibernate, Ktor, JUnit, Mokito

Tools: MySQL, Apache Kafka, Docker, PostgreSQL, Datadog, Jira, Firebase, MongoDB, Github, Figma, OpenAI API
